

Three Point Extension Pole Kit Instructions

Install 1 roll of tape on each side of Court-Line Tape Machine and adjust tape guides to a 2" wide line. Check this adjustment by making a shore test run. Place tape machine at the top of the arch of the key. For high school and college this would be a straight line with the basketball goal.

Review the most up to date court dimensions available before painting any lines.

Assemble an extension pole to the tape machine by threading it into the flex joint. Thread a second pole to the first pole.

The next extension should be the one with the support dolly, followed by the remaining pole. This would be sufficient for installing the 3-point line for high school, but for College and NBA Courts you will need to use 2 of the 2' radius rods that come with the Court-Line Tape Machine to get the proper length.

Remove center pivot from the **Court-Line Tape Machine** and install on the last extension pole. Measure down from the center of the basketball goal and mark this spot on the floor. Place the center pivot on this spot and adjust the length so that tape machine will intersect with the top of the key. When properly adjusted the tree point line will overlap the key line.

One person will need to hold the center pivot in place or it can be pinned to the floor with a nail. Place tape machine about 15' from the top of the key and apply tape on a test run. Make any necessary adjustments and repeat the test. Before installing three point line be sure there is enough tape on each roll to completely install the 3-Point Line. Before painting, go back over tape to be sure it has not come loose and all the edges are firmly adhering to the floor.

Line guide brackets are marked with both inch and metric scale for easy adjustment to line width. These slotted brackets allow tape guides to be adjusted to varying widths and re very helpful when repainting old lines or installing special width lines. A 1" and 2" wide straight guide is also furnished for the purpose of taping existing lines for repainting.

The **Court-Line Tape Machine** comes supplied with tape guides for $\frac{3}{4}$ ", 1", and 2" wide tape. These are safely stored I the right hand tape collar (marked storage bin) to prevent them from being lost. A 1 $\frac{1}{2}$ " tape guide is also available but is not included.
